MCM 67″ Patient Transfer Roller Board | MCM 130

Stock Photo – Options May Vary

FACTORY NEW

The MCM 67″ Patient Transfer Roller Board, model MCM 130, helps staff move patients from one surface to another. Mid Central Medical, a U.S.-based maker, builds it for lateral transfers in hospitals, surgical centers, and long-term care facilities.

In addition, the 67″ board removes the need to lift patients by hand, which helps lower the risk of caregiver injury. Meanwhile, smooth rollers let staff move patients between beds, stretchers, and tables with less effort.

Furthermore, the board comes with a protective cover and has a smooth surface that is easy to clean.
