

SchureMed Shoulder Assistant | 800-0088

Stock Photo - Options May Vary

FACTORY NEW

The SchureMed Shoulder Assistant is designed to optimize patient positioning in the beach chair position for shoulder surgery. It mounts onto the side of any standard operating room table, providing a non-sterile base for sterile component insertion. The device maintains a low profile while delivering exceptional control and positioning capabilities.

The upper extremity positioner and control tube are steam autoclavable, ensuring a sterile environment for upper extremity procedures. This design frees O.R. staff from manually holding the patient's limb during surgery, improving overall staff efficiency and allowing them to focus on other critical tasks.

The system features surgeon foot control for quick and precise intra-operative adjustments, unlimited surgical site access, and easy assembly. These capabilities combine to provide strength and adaptability throughout the surgical procedure.

FEATURES

- Surgeon foot control provides quick and precise intra-operative patient positioning
- Unlimited surgical site access and positioning
- Easy to assemble
- Save money by not having to buy expensive drapes
