

MCM Universal Rail Clamp-Aluminum | MCM 163

Stock Photo - Options May Vary

FACTORY NEW

The MCM 163 is a universal rail clamp constructed from lightweight aluminum, designed for flexible positioning in surgical applications. The spring-loaded clamp attaches anywhere along the rail and locks securely with an ergonomic handle, supporting both vertical and horizontal positioning. It accepts both round and flat posts, making it adaptable to various surgical setups.

The aluminum construction provides durability while minimizing weight for ease of use during procedures. The smooth finish resists corrosion and simplifies cleaning to maintain hygienic operating room standards. The clamp's strong grip and compact design support quick setup and adjustments, reducing setup time during surgeries.

The MCM 163 enables efficient workflow and stability in demanding clinical environments. Its compact size allows for easy storage and transport between operating rooms, making it a practical addition to any surgical facility.

FEATURES

- Universal Rail Clamp
- Spring Loaded Clamp attaching anywhere along the rail
- Locks Securely
