Intensa Ergonomic Lab / Anesthesia Chair | 8302

Stock Photo – Options May Vary

FACTORY NEW

The Intensa 8302 Anesthesia Chair, formerly sold under the Hassoc name, is built for long shifts in labs, operating rooms, and anesthesia settings. Because the seat adjusts from 23 to 33 inches, each user can find the right working height for their task.

In addition, the aluminum base with toe caps adds stability, and the 18-inch footrest includes casters. Durability sets the Intensa 8302 apart from lighter-duty seating.

The 3/4-inch commercial-grade seat virtually eliminates warping and breakage, holding up to years of daily use. Meanwhile, ISO 9002 components for most metal parts guarantee consistent quality throughout.

FEATURES

- Aluminum Base w/ Toe Caps
