Intensa Hydraulic Surgical Stool | 744

Stock Photo – Options May Vary

FACTORY NEW

The Intensa 744 Hydraulic Surgical Stool is built for hands-free height changes in surgical and clinical settings. Because the chrome solid steel foot control drives the hydraulics, you can raise or lower the seat from 19.5 to 26.5 inches without using your hands.

In addition, a rotation lock holds the seat steady when you need a fixed position. Comfort and strength go hand in hand on this stool.

The 3.5-inch thick, fire-resistant foam gives a firm but comfy seat with no bottoming out on the seat pan. Meanwhile, the 3/4-inch thick commercial-grade seat all but removes warping and breakage, and ISO 9002 parts for most metal pieces ensure quality.
