

MCM Patient Transfer Roller Board Rack Wall Mount | MCM 132

Stock Photo - Options May Vary

FACTORY NEW

The MCM 132 is a wall-mounted storage rack designed to keep patient transfer roller boards easily accessible in medical facilities. The rack mounts securely to walls or doors, keeping equipment off the floor while saving valuable space and maintaining an organized environment.

Constructed from durable stainless steel, the MCM 132 withstands high-traffic healthcare settings and provides long-lasting performance. Its universal design accommodates roller boards from most major manufacturers, offering broad compatibility across different equipment types.

The rack does not include mounting hardware, allowing facilities to select appropriate fasteners based on their specific wall materials for secure installation. Quick access to the roller board enables staff to respond promptly during patient transfers while reducing injury risk.
