FACTORY NEW

The MCM 358 Large Finger Trap is a surgical device manufactured in the United States using high-quality materials. It is designed to provide strong, reliable support during hand and finger surgical procedures. The trap offers both strength and flexibility, holding firmly while adjusting easily to accommodate various surgical needs.

MCM Finger Traps are available in multiple sizes to support a wide range of surgical applications. Surgeons and clinical staff can select the appropriate size for optimal fit and performance. Each trap is engineered for precision and safety, with a simple design that integrates seamlessly into existing operating room setups.

These traps are built to deliver consistent, dependable performance in busy clinical environments. The device helps improve surgical workflow and can be used in any operating room or surgical suite. MCM focuses on strong design and lasting performance, with every product meeting strict quality standards.
