

GE Case Stress Test Printer Gas Shock - New

Stock Photo - Options May Vary

FACTORY NEW

The GE Case Stress Test Printer Gas Shock is a high-quality non-OEM replacement gas spring dampener designed for the printer door assembly. This gas shock delivers controlled opening and reliable support, allowing clinical staff to access the printer compartment quickly and safely during testing procedures.

Over time, original gas shocks can lose pressure and stop holding the printer door open. Replacing this common wear part helps your team work more efficiently and reduces unexpected downtime.

This replacement gas shock is made to fit compatible GE CASE stress test systems and comes with new end tips for quicker, easier installation. Made from strong, durable materials, this unit is brand new and ready to install.

FEATURES

- Brand New
- Non-Oem
- High Quality Replacement
