

Oakworks Arm Hammock

FACTORY NEW

The Arm Hammock is a patient positioning accessory designed to provide comfortable arm support during prone procedures. It attaches easily to any face rest platform and accommodates patients ranging from 5' to 7' tall, making it suitable for a wide range of body types.

This adjustable armrest eliminates the discomfort patients experience when uncertain where to place their arms during treatment. The unique design offers natural-feeling support that reduces strain and improves overall patient comfort during extended procedures.

The Arm Hammock is compatible with portable treatment tables and CFPM Imaging Tables, making it a versatile addition to any clinical setting. Its adjustability ensures it can accommodate a broader range of patients than comparable competitive products.
