

Pedigo Stretcher Accessories

CuVerro®
ANTIBACTERIAL COPPER ALLOY

Stock Photo - Options May Vary

FACTORY NEW

Pedigo offers CuVerro® Bactericidal Copper Alloy side rails as an upgrade option for stretcher models 5110 and 5400.

CuVerro® is a solid touch surface material registered by the EPA and represents a natural bactericidal element for ongoing infection control in healthcare facilities.

Lab testing demonstrates that copper kills 99.9% of bacteria associated with disease and infection, including MRSA, within two hours of contact. The material continues to kill bacteria 24 hours a day, week after week, between regular cleanings without requiring additional chemical treatments.

CuVerro® alloys have proven effectiveness against multiple pathogens including Methicillin-Resistant Staphylococcus aureus, Staphylococcus aureus, Enterobacter aerogenes, Pseudomonas aeruginosa, and Escherichia coli O157:H7. This upgrade is compatible with single-release side rail configurations.
