

SchureMed Skytron 6700, 6701 Surgical Table Pads

Stock Photo - Options May Vary

FACTORY NEW

SchureMed Skytron 6700 and 6701 surgical table pads are engineered for pressure management in operating room environments. These pads feature multiple layers of foam designed to maximize pressure-reducing properties and conform to the patient's body while providing adequate support. SchureMed brings over 20 years of experience in pressure management, utilizing engineered foams and covering materials optimized for surgical applications.

The multi-layer foam construction addresses the limitations of single-foam designs by combining conformability, body support, and protection of bony prominences. These pads are suitable for use on O.R. tables, stretchers, armboards, and other surgical padding applications throughout the surgical suite.
