

SchureMed Spine Frame Transport Dolly | 800-0265

Stock Photo - Options May Vary

FACTORY NEW

The SchureMed Spine Frame Transport Dolly (Model 800-0265) is a durable transport solution designed for moving the Schure Spine Frame within the operating room. It enables surgical staff to efficiently wheel the frame to the operating table for patient positioning procedures.

This transport dolly features a broad base design that resists tipping while securely holding the Schure Spine Frame during movement. The equipment is engineered to support the safe and stable transport of positioning apparatus used in gynecological, urological, laparoscopic, and orthopedic surgical procedures.

The dolly is straightforward to operate, allowing operating room personnel to quickly position the frame at the surgical table. It represents SchureMed's commitment to improving patient safety and comfort through reliable surgical positioning equipment.
