FACTORY NEW

Syris Scientific Visual Enhancement System: v300H. Now RoHS compliant. The v300H is our entry-level product incorporating the v600 patented cross-polarized subsurface technology into an affordable package.

Suggested use with sclerotherapy, hair restoration, tattoo removal, general surgery or aesthetic filler procedures. Syris Scientific, a Maine-based medical company founded in 1997, is the leader in advanced visualization systems for surface and subsurface viewing. Thousands of physicians and medical professionals worldwide use the v300H and v900L.

Training courses recommend these devices.

FEATURES

• Revolutionary patented cross-polarized technology allows the user to see approximately 1mm below the skin's surface
• The v300 emits a larger, 6 to 8 inch diffused area of light which is preferred by some physicians when used for general dermatology, sclerotherapy and hair restoration
• Combine this with changeable magnification and you have the complete visualization system for all of your needs
• Allows the user to be hands-free during procedures
• The reduced glare minimizes stress and eye fatigue
