Stryker Trio Surgical Table/Stretcher – Refurbished

Stock Photo – Options May Vary

FULLY REFURBISHED · CLINICALLY CERTIFIED

Stryker Trio Surgical Table/Stretcher – Refurbished. The Stryker Trio Surgical Table/Stretcher 1033 functions as both a surgical table and stretcher. It supports the patient from pre-op to recovery, reducing the need for transfers and minimizing injury risks for patients and staff.

Additionally, it features the Quadra Channel™ stabilizing lift system for smooth height adjustments. As a result, the system improves access and maintains patient stability during surgical procedures. Furthermore, the Stryker Trio Surgical Table/Stretcher's radiolucent siderails allow fluoroscopy access without moving the patient.

This enhances imaging accuracy and streamlines surgical workflows. Moreover, four-wheel steel-ring brakes with dual-side activation ensure secure positioning and easy control.
